FLAWTECH RT “STACKED” KIT (NEW!)

KIT PURPOSE:

#RTS-K1

The RT Stacked Kit is designed to allow the RT technician to adjust the thickness of a shot from 0.25” up to 2” T. The plate specimen has tick marks in 2” increments along the plate edges. These tick marks allow the technician to quickly adjust the plates axial location which in turn will move the flaw location(s) along the axis of the weld. The Kit design allows the technician to also shuffle the plates from top to bottom, thus providing the technician with thousands of possible plate thicknesses and flaw locations.

KIT CONTAINS 8 PLATE SPECIMENS

- Each specimen is 0.25” T x 4” x 8” Carbon Steel
- Of the 8 plates, 6 contain flaws and 2 are blanks.

FLAWS INCLUDED:

- (1) IP
- (2) Slag Inclusions
- (1) LOF (sidewall)
- (1) Centerline Crack
- (1) Group Porosity

Each plate has a weld that runs the 8” length of the plate and the crowns and roots have been ground flush in order to accommodate the stacking of the plates.

KIT DOCUMENTATION INCLUDES:

PDI UT CALIBRATION BLOCKS

PDI ALTERNATIVE ASME CALIBRATION BLOCKS

The PDI Alternative ASME blocks meet the requirements of the Performance Demonstration Initiative (PDI) Procedure No. PDI-UT-1, Rev. C, Fig. 4(Ferritic) and PDI-UT-2, Rev. C, Fig.4(Austenitic).

These blocks cover the generic procedures for the ultrasonic examination of both ferritic and austenitic pipe welds.

The blocks offer users an economical alternative to fabricating multiple curved cal blocks (pipe sections) in many diameters and wall thicknesses.

The blocks are normally supplied in sets of 3 individual blocks; A516 Grade 70 Carbon Steel, Type 304/304L Stainless Steel, and also in Type 316/316L Stainless Steel. Individual blocks of any one alloy may also be purchased. The blocks are made from ultrasonically inspected, heat number- traceable material.

The block design consists of four (4) steps (representing wall thicknesses) measuring 0.5", 1.0", 1.5", and 2.0". Each step contains an EDM notch machined to a depth of 10% of wall x .010" wide x 2.0" long. Overall block size is 2.00" wide x 2.25" tall x 10.00" long.

The scanning and reflecting surfaces are intentionally machined to simulate pipe and plate surfaces of 250 Ra maximum finish. Each block is permanently machine-engraved on one edge to include the block description, serial number, alloy, and heat number.

All materials available upon request.

ASME UT CALIBRATION STANDARDS

ASME SEC. V BASIC CALIBRATION BLOCKS

The block is used for establishment of primary reference responses for UT examination welds. Block contains three (3) DAC side drilled holes at 1.5" deep minimum at diameters between 0.0937" and 0.25" depending on the block thickness (T). Hole locations through the thickness are 1/4, 1/2, and 3/4 T. The block will also have two (2) notches measuring 2% (T) deep x 1.0" long minimum. Specification: ASME Section V, Article 4, Figure T-434.2.1. Dimensions: T x 6.25" x 3 (T) minimum. Block is available in normal thicknesses of 0.5", 1.5", 3" and 5".

ASME SEC. V ANGLE BEAM CALIBRATION BLOCKS

The basic calibration block for weldments shall be a section of pipe of the same normal size, schedule, heat treatment and material specification as the material being examined. Standard will contain four (4) notches, two (2) longitudinal and two (2) circumferential on both the OD and ID at a target depth of 9.5% of nominal wall thickness and a minimum of 1" long. FlawTech can provide the material or use customer furnished material. In accordance with ASME Sec V, Article 4, Figure T-434.3 (Calibration Block for Pipe.)

FlawTech offers ASME Calibration Standards in any commercially available pipe size or plate thickness. Custom options are also available. Contact FlawTech for more information.

PDI UT 10 CALIBRATION STANDARDS

PDI CONTOURED CALIBRATION BLOCKS FOR DISSIMILAR METAL (DM) WELDS

Contoured calibration blocks are used in the manual examination of dissimilar metal (DM) welds and base materials including piping susceptible to Stress Corrosion Cracking (SCC). The blocks are used to establish a reference sensitivity level from which subsequent exams may be compared. The blocks are precisely machined to fit contoured search units for axial and circumferential scanning directions. Customer specifies block contour radius based on diameter of material being inspected. Blocks are manufactured in Type 304 or Type 316 Stainless Steel and are certified to meet Performance Demonstration Initiative PDI-UT-10 and PDI-UT-8.
